PROJEKTRON BCS - MORE THAN JUST PROJECT MANAGEMENT SOFTWARE

BCS stands for Business Coordination Software. The web-based Projektron BCS project management software is synonymous with quality, efficiency and transparency. Project management, customer management (CRM), time recording, a ticket system and much more: Projektron BCS merges professional tools for projects and companies in a single software.

Human Resources

Personnel-management	Capacities
Work schedule	Forecast
Skills	Basic workloads

Time recording	Work organisation
Timesheet	Workflows
App	Calendar

Project Management

Preparation — Stakeholders, Risks

Planning — Dates, Costs, Resources

Monitoring — Milestones, Warnings

Controlling — Efforts, Proceeds

Customer Relations

USER OPINIONS

Our flexible project management software can be used to increase profits in all situations where work is performed in projects. More than 700 customers throughout Europe rely on Projektron BCS, including international companies as well as medium-sized enterprises and public institutions. Alongside IT system houses and multimedia agencies, consulting firms and research institutions also count on Projektron BCS when it comes to planning their projects.

„Since we implement our project work with BCS, project management is perceived differently in our team. Scheduling, hourly billing, task assignment and team scheduling are just a few important functions that make working together more transparent. In the weekly project manager meeting, BCS has become the measure of all things."

Mirko Wittek
Senior Manager Business Applications and Processes

„In addition to the high degree of standardisation thanks to the BCS approach, we particularly appreciate the fact that we can access real-time data and that our project data is always up-to-date despite the great complexity. With BCS, we are now able to provide information to customers at the touch of a button."

Christian Schmelzing
Senior Manager Fertigung und Montage, ZF Friedrichshafen AG

„We use Projektron BCS centrally for over 23 of our own country organizations. What makes it special is that we use consultants from many different countries in almost every one of our large projects, and all planning, resource allocation, time tracking and billing is done in one BCS. We create all customer invoices there in local currencies and manage our own international intercompany billing. Having all countries covered by one central solution is a huge advantage, in addition to the high level of process integration."

Peter Schürmann
Head of Global Project Management
