

Easily and flexibly integrate JIRA issues and work logs into your Projektron BCS project.

Functions

The interface between Projektron BCS and JIRA provides you with the following possibilities:

- ✓ Bidirectional synchronization between JIRA issues and Projektron BCS tickets
- ✓ Bidirectional synchronization between JIRA work logs and Projektron BCS time recording
- ✓ Bidirectional synchronization between JIRA estimates and Projektron BCS resource management
- ✓ Flexible mapping between the project structures using the JIRA-specific scripting language JQL

Information on JIRA interface

Licences

JIRA and Projektron BCS communicate via a **web service** called **JIRA-SyncAdapter (JSA)**. This web service is licensed by Projektron.

In order to exchange data between JIRA and Projektron BCS, you also need the Projektron BCS Connector for JIRA. The Connector is available as a free plug-in on Atlassian Marketplace.

What you gain from it

The JIRA interface enables you to:

- ✓ easily integrate issues into your Projektron BCS project and consider development efforts in your project evaluations.
- ✓ use free capacities efficiently and identify possible bottlenecks in the Projektron BCS resource load view while your developers are working on JIRA issues.
- ✓ keep an overview of the project progress with comparisons of target and actual values, Gantt charts and traffic lights.
- ✓ detect undesired developments by projected time and cost overruns and counteract at an early state.
- ✓ easily generate project reports and inform stakeholders in time and when required.
- ✓ comfortably invoice projects including efforts from JIRA work logs.
