# Process automation with **BPMN** in **BCS**

With the integrated, intuitive **BPMN Designer**, you can model your processes according to BPMN 2.0 - the internationally recognized notation standard for business process models. Using the graphical program interface, you define all activities in the process, including the associated process forms, and assign the people and groups of people involved.

> Are many departments and employees involved in your **onboarding** and **onboarding processes**? employees are involved?

> Do you want to generate contacts in **CRM** from e-mail inquiries and send them to the sales department?

With your individually designed process in BCS no problem!

> **Leave requests** should be immediately available to all responsible parties for approval, whether in the office or remotely?

> In the case of inventory items, **purchasing processes** are to be automatically created assets with associated contract documents?

Further application examples of our customers

- ✔ Invoices & Offers
- ✔ Compensatory time off

- ✔ Business trips
- ✔ Resources
- ✔ Material costs
- ✔ Stage Gate Models

AUTOMATE YOUR BUSINESS PROCESSES EASILY AND INDIVIDUALLY!

David Rosenau
Head of Solution Consulting/SAP Senior Consultant, Mercoline GmbH

„As soon as the graphical user interface was available in BCS, we started to actively use the BPMN functions. Very quickly, we were able to digitally map our invoice workflow and approval processes in BCS. Paper invoices that arrived in the office could thus be digitized and submitted to various cost center managers for review and approval without them having to be on site."

Ralf Junge
Head PMO, Sandstein Neue Medien

„We are automating our internal management and support processes. In the first step, we ventured into our process of „sifting through inquiries and requests for proposals": If an inquiry from a prospective customer is received by one of our employees - be it in sales, team assistance, management, support or a project manager, BCS automatically generates a new prospective customer in the „External" area with all previously available information and, if applicable, existing documents, creates a ticket and assigns it to a suitable processor in sales. The latter can then decide whether it is worthwhile to follow up on the inquiry or the lead."

SANDSTEIN NEUE MEDIEN

Raphael Becker
Teamleader Order Management & Billing, AM GmbH

„The onboarding of new employees takes place at our company as a BPMN-driven process in which all relevant departments and positions are involved. In the course of the process, all relevant information is automatically stored directly in the software at the various objects. We can rely on the fact that everything is thought of.
New faces are well looked after from their first day at work in our company and find everything they need to arrive."
