Administration Webinar for Projektron BCS

The webinar provides a brief overview of the administration and monitoring possibilities in the Projektron BCS administration area and configuration using the WebConfig editor.

You will learn how to make preferences available to all users, use rights settings to limit the visibility of views, look at the license consumption of the current day, add a new logo to quotation and invoice letterheads, show attributes on a view and redefine labels. After the webinar, you will be provided with a handout summarizing the explained points.

With the binding confirmation of your appointment, you will receive access to a 45-minute video and a handout, which you should watch before the webinar and note down any questions you may have. We will then be available to explain and answer your questions on the topic during the two-hour session.

Target group

The offer is aimed at administrators and Projektron BCS users who only use the BCS interface to provide administrative support for Projektron BCS.

The webinar offers interested parties a brief overview of administrative functions in the software interface.

Framework

Scope:	Two-hour period for participants' questions about BCS and topics of the webinar video on the running BCS system.
Language:	English
Prior knowledge:	Participation in an online presentation, release presentation, presentation day or training.
